

VITA 49.2

PRODUCT OVERVIEW

The VITA49.2 Subsystem is Geon Technologies' extensible Intellectual Property (IP) core for ANSI/VITA49.2-2017 compliant communications on a programmable logic device. VITA49.2 provides standardized communications across the system while remaining agnostic of the transport backbone used (UDP/IP, PCIe, Aurora, etc).

VITA49.2 is a highly customizable standard, and Geon's advanced IP core technology is optimized to meet your project's unique requirements with minimal resource utilization.

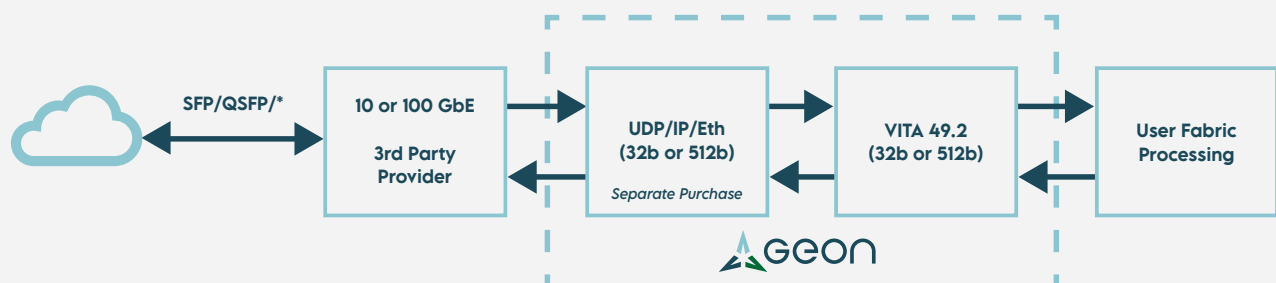

VITA 49.2 IP CORE

SUPPORTED FEATURES

- ✓ VITA49.2 Data, Context, and Command packet parsing and encapsulation
- ✓ VITA49.2 Controllee and Controller roles
- ✓ Standard AXI4 interfaces: AXI4-Stream for data interfaces and AXI4-Lite for register control
- ✓ Supports AMD Zynq 7000 and UltraScale+ families (Vendor Independence COMING SOON!)
- ✓ Purchase options for supporting 10 GbE and 100 GbE backbones
- ✓ See the Product Guides ([10 GbE](#) and [100 GbE](#)) for detailed port descriptions, register maps, and limitations

TYPICAL APPLICATION

PRODUCT DETAILS

CORE PART NUMBERS

geon_ip_00.00.01
32 bit (10 GbE backbone)

geon_ip_00.00.11
512 bit (100 GbE backbone)

DELIVERY

The core is available in two delivery configurations:

ENCRYPTED: All source code is encrypted except for a reference testbench and all constraints files

SOURCE CODE: All source code may be viewed and changed

LICENSE

SITE-WIDE: The core may be used on all projects within the organization

ADDITIONAL SUPPORTED FEATURES

- ✓ VITA49.2 Packet Classes to process packet definitions from multiple vendors or organizations
- ✓ Either "in-band" (on the same link as Data/Context packets) or "out-of-band" VITA49.2 Command packet flow
- ✓ Multi-channel implementations for high-rate data using multiple VITA49.2/UDP/IP stacks (UDP/IP core available at an additional cost)
- ✓ Multi-stream implementations for low-rate data using a single VITA49.2/UDP/IP stack and multiple stream identifiers

INCLUDED WITH PURCHASE

- ✓ Wireshark plugin for packet analysis over a UDP/IP network
- ✓ Embedded C++ software utility for register control and Bitbake recipe to cross compile with Yocto or Petalinux
- ✓ Host C++ packet processing software for communicating with the core over a UDP/IP network
- ✓ Reference project for one of the following platforms:
 - Picozed 7030 FMC2 (Zynq-7000) with 1GbE
 - ZCU102 (UltraScale+) with 10GbE
 - ZCU111 (UltraScale+) with 10GbE
 - ZCU208 (UltraScale+) with 10GbE
 - ZCU216 (UltraScale+) with 10GbE
